

INSTRUCTIONS

Materials needed: Grills

Estimated Install time: < 10 minutes

1. Take your newly purchased grill and make sure you have it facing the way shown as pictured above.
2. Start by placing the grill in the existing opening in your car and gently pressing it into place, yet at the same time be cautious not to scrape any of your paint.
3. When satisfied with its position then it should be secured by itself. If it seems that it going to come loose then either wire-tie it to your existing grill or use Permatex to seal it on around the edges.
