

INSTRUCTIONS

Materials needed: Grills

Estimated Install time: < 10 minutes

1. Take your newly purchased grill and make sure you have it facing the way shown as pictured above.
2. Start by placing the grill in the existing opening in your car and gently pressing it into place, yet at the same time be cautious not to push too hard and crush the grills.
3. When satisfied with its position then it should be secured by itself.

Please Note: If you feel these instructions are inadequate, please feel free to add extra security to the installation. Applying 3m red-back foam tape to the back of the grills that comes in contact with the bumper is a great way to add strength to the installation.
